Re: Product Manager, Job ID 784450

Dear NYC Office of Technology and Innovation Hiring Team,

When I built CallNYC, the governing question was small enough to be useful: what would help a New Yorker understand an issue and take one clearer next step? The raw material was constituent-services data. The product work was to decide what belonged on an issue page, how the information should be organized, what uncertainty had to remain visible, and where the first version should stop. I carried the independent civic prototype from problem definition and information architecture through implementation and public release, while making clear that it was not an official City service.

That boundary is part of why the Product Manager role interests me. Public products need discovery, roadmaps, requirements, user stories, acceptance criteria, KPIs, and launch plans; they also need judgment about authority, trust, and what evidence can honestly support. Across Thick Arts, WOW List, NYC Artist Coalition, FairRentNYC, and KC Town Hall, I have synthesized stakeholder listening, public data, analytics, operational constraints, and technical realities into sequenced decisions. I work comfortably with designers and engineers because I have also built and maintained the systems, supported users, tested releases, and stayed for what happened after launch.

My work is digital, but it does not stop at the screen. Tired of Tires connected outreach and intake to scheduled collection and a City recycling handoff. WOW List replaced a complex event form with one collaboratively editable text field, then joined that interface to onboarding, support, instrumentation, and production operations. The principle is the same in each case: a feature is only as useful as the next action it makes possible.

I would welcome a structured product exercise grounded in one resident-facing service: define the user problem, identify what must be learned, set a version-one boundary, write acceptance criteria, choose an outcome measure, and name the evidence that should determine what happens next. The durable result should be not only a launched product, but a program and agency team better able to learn from it and carry it forward.

Warmly,

A handwritten signature in black ink, appearing to read 'Jamie Burkart', with a long, sweeping horizontal line extending to the right.
